

Geared for service

Expert service - regardless of the brand

David Brown Santasalo is the service provider of choice for many of the world's leading industrial companies. With almost three centuries of combined gear design and manufacturing expertise, David Brown Santasalo understands how to maintain and service even the most difficult, mission-critical gear units to ensure optimal results and long gear unit life. Our global service network provides support and technical expertise wherever and whenever you need it.

Getting the most from your process equipment calls for a long-term, proactive approach to service and maintenance. David Brown Santasalo provides proactive service across the entire lifecycle of your machines. We work with you to identify when to carry out maintenance, how to replace parts cost effectively and when to upgrade existing gear units to achieve maximum performance.

Global service capabilities

David Brown Santasalo's global service centre footprint is well equipped to support service, repair and overhaul of many types of gear units. With locations around the world, we can offer services within easy reach of most locations and can guarantee quick response and turnaround of your service project.
